

K-8 DISCOVER Snakes

Common snakes found at Devils Tower National Monument include the bull, garter, and rattlesnake. The bull and garter snake are harmless, whereas the rattlesnake is **venomous** (poisonous).

Remember that all snakes, including the venomous ones, are useful to nature's delicate environmental balance! You should leave all snakes alone!

Do not pick up any snake and watch carefully where you step. If you happen to see a snake, stand quite still. Snakes will defend themselves if they cannot escape.

Shade the "O" dark and the "X" light.
